

XIAMEI KLANCNİK

Data Scientist
Energy, Housing & Public-Sector Data

Nijmegen, NL
xklancnik@gmail.com
linkedin.com/in/xiamei-klancnik-26a4b3233

PROFILE

Applied data scientist with an **MSc Data Science (cum laude)** and **BSc Mathematics**. Two years of energy-sector experience: forecasting, grid-congestion analysis and linear optimization, with results adopted by the Province of Utrecht. Currently data analyst at the Belastingdienst and founder of WoonBusters, a national rental-market data platform built and operated solo. Strong in time series, optimization, Bayesian statistics and making complex analyses understandable for non-technical stakeholders.

EDUCATION

MSc Data Science *cum laude*

Radboud University

Thesis: Transfer Learning for Limited-Data Forecasting (8). Statistical Machine Learning (8.5), Machine Learning (9), Law and Technology (10), Text & Multimedia Mining (8.5)

BSc Mathematics

Radboud University · Minor Physical Chemistry

Thesis: Three-Body Problem (8) — numerical methods, stability and error analysis

TECHNICAL SKILLS

Programming

Python (proficient), SQL, SAS, TypeScript/JS, R, Dart/Flutter, C++, Java

Forecasting & Machine Learning

PyTorch, Transformers, LSTM, Transfer Learning, scikit-learn, LightGBM, time series at 15-min resolution

Optimization

Linear programming (battery sizing, work allocation), scenario modelling, uncertainty analysis

Statistics & Methods

Bayesian models, (generalized) linear models, non-parametric methods, Monte Carlo simulation, causal inference

Data Engineering

ETL pipelines, PostgreSQL, Teradata → DB2 migration, parallel & async processing, web scraping at scale (Playwright)

Production & Deployment

FastAPI, Docker, GitHub Actions, pytest, Linux servers & systemd, Stripe; LLM applications (OpenAI API, RAG, embeddings)

KEY STRENGTHS

Strategic: architected energy system adopted by Province of Utrecht

Independent: sole data scientist in R&D; solo-built a national data platform in production

Communicator: translates ML for provinces, entrepreneurs and clinicians

Creative: transfer learning for scarce data, Bayesian legal-rent estimation, LLM data extraction

LANGUAGES

Dutch (native) · English (fluent)

EXPERIENCE

Data Analyst · Belastingdienst

Feb 2026 – present

Developing a work-allocation tool in Python for team leaders and the regiekamer: demand forecasting of case inflow, prediction of cases at risk of exceeding their legal expiration dates, and linear-programming optimization to distribute work across teams. Migrating analytics workloads from Teradata to DB2 (in progress). SAS programming and report development on loonaangifte (payroll tax) data.

Founder · WoonBusters

Oct 2025 – present · woonbusters.nl

National rental-market data platform, monitoring the full advertised rental supply of the Netherlands daily: 1,000+ agency sites, deduplicated, enriched and tested against the legal rent-points system (WWS). Bayesian model estimating the legal maximum rent per dwelling, validated against the Huurcommissie's official check. Public quarterly market report (55,000+ listings), B2B data API for municipalities, paid subscriptions for renters. Solo-built and operated: scraping fleet on 8 servers, LLM extraction, FastAPI, PostgreSQL, Next.js.

Data Scientist R&D · INNAX

Feb 2024 – Feb 2026 · Veenendaal

Built energy forecasting and optimization system adopted by the Province of Utrecht for infrastructure planning and grid-congestion strategy. Year-ahead forecasting combining growth projections, weather and energy-price signals at 15-minute resolution. Linear optimization for battery sizing with degradation constraints. End-to-end ownership: ETL pipelines, model deployment and policy dashboards for provincial decision-makers.

Research Intern · Radboudumc

Jan 2023 – Jul 2023

Developed Monte Carlo simulation models for spatiotemporal colorectal cancer metastasis prediction to inform clinical decision-making.

SELECTED PROJECTS

INNAX Energy Hubs (Production)

Adopted by Province of Utrecht for energy-hub scenarios and grid-congestion strategies. Year-ahead forecasting with weather/price signals, linear optimization for battery sizing. *Python, Linear Optimization, Forecasting, ETL*

Bayesian Huurcheck — WoonBusters (Production)

Bayesian WWS model estimating the legal maximum rent for 55,000+ listings per quarter; holdout-validated with calibrated confidence intervals. Powers the public market report on rents above the legal maximum. *Bayesian modelling, PostgreSQL, Python*

MSc Thesis: Transfer Learning for Forecasting (8)

Transfer learning consistently outperformed classical baselines and from-scratch deep models in limited-data regimes. *Transformers, Transfer Learning, LSTM, LightGBM*

Ingestigate (Completed, Solo)

Nutrition intelligence app: LLM food analysis, cross-platform iOS/Android, shipped end-to-end. *Flutter, PostgreSQL, Edge Functions, OpenAI*
